1. Pendahuluan

Requirements Traceability Matrix (RTM) adalah dokumen yang membuktikan bahwa setiap kebutuhan bisnis yang tertulis dalam BRD sudah terdefinisikan di SRS, sudah terpetakan ke entitas database di ERD, sudah memiliki test case di Test Plan, dan sudah diverifikasi dalam skenario UAT.

Dokumen ini adalah bukti bahwa tidak ada requirement yang 'hilang' atau 'terlupakan' selama proses pengembangan sistem — dari definisi bisnis hingga pengujian akhir.

1.1 Cara Membaca RTM

- Setiap baris merepresentasikan satu functional requirement dari BRD
- Kolom Coverage menunjukkan apakah requirement sudah ter-cover di setiap fase dokumentasi
- Covered (✓) = sudah ada referensi eksplisit di dokumen tersebut
- Partial (~) = ter-cover sebagian, perlu perhatian
- Not Covered (—) = belum ter-cover, harus ditindaklanjuti
